We take pleasure in presenting you with our new Illustrated Catalogue of

BUILDERS' HARDWARE.

In preparing this catalogue we have been actuated by an earnest desire to make it as useful as possible to our customers, as well as an advertising medium for ourselves.

This catalogue contains a variety of goods of the best styles of the leading Hardware Manufacturers, which we are prepared to sell at lowest market rates.

Our Bronze Metal Hardware will, unless specially ordered, be furnished Light Bronze.

We would especially recommend the Bronze-Plated finish; it is intended to take the place of Real Bronze Hardware; it is finished to imitate real bronze, and is much lower in price. This finish looks well and wears well.

If you are in need of anything in the hardware line, send us a list of what you want and we will be pleased to furnish you with an estimate.

In ordering goods from our catalogue it is best to give the page on which it is found, in addition to its name.

We here take occasion to express thanks to our customers for the very liberal patronage and encouragement they have extended to us, and hope and expect an increased continuance of their orders.

Respectfully yours,

J. B. SHANNON & SONS,

No. 1020 Market Street, Philadelphia.

We take great pleasure in placing before our customers the Chicago Spring Hinge, which we consider one of the best in the market—both in appearance and durability—and at a less price than any other first-class Double-Acting Spring Hinge. The spring is not contained in the butt, but placed in a connecting case between two three-leaved butts, which allows the use of a long spring, and, when applied to the door and closed, nothing is seen more than an ordinary butt for corresponding size of door, avoiding the clumsy appearance usual to spring butts with the spring contained in them. The Double-Acting Blank Butt is intended to be used with Spring Butt, to reduce the cost on doors light enough for one spring to operate them.

RIGHT-HAND

We have their Locks ar

To take the entrance.

Doors wh

HAND OF DOORS.

We have had the above cut made to better enable our customers to intelligently order their Locks and Hinges.

To take the hand of a door, you should stand on the outside of the house or room, facing the entrance.

Figure 1. Shows a right-hand door and requires right-hand hinges and locks.

Figure 2. Shows a left-hand door and requires left-hand hinges and locks.

Figure 3. Shows a right-hand door opening towards you and requires a left-hand mortise knob lock; a right-hand recess door lock; a right-hand reverse bevel rim lock; a right-hand reverse bevel rim or mortise night latch.

Figure 4. Shows a left-hand door opening towards you and requires a right-hand mortise knob lock; a left-hand recess door lock; a left-hand reverse bevel rim knob lock; a left-hand reverse bevel rim or mortise night latch.

Doors which require right-hand reverse bevel locks need left-hand hinges, and doors which require left-hand reverse bevel locks need right-hand hinges.

This cut is one-half size.

THE CHAPLIN WINDOW LOCK

Is the only window lock manufactured that locks the window, either open or shut, and can be applied to any window, whether old or new.

It is the only practical window lock on the market.

You can leave your window open by day or night, feeling perfectly safe from intrusion of petty sneak thieves, as it locks itself if the window is forced from the outside.

FRANCE'S SHUTTER HOLDER.

SHUTTER LOCKED. SHUTTER BOWED.

OPEN OR STAYED BACK.

France's Shutter Holder does away with Bolts and Turnbuckles, and bows either shutter independent of the other, and at any desired angle.

It is much more secure than a bolt and cannot rust and strain the shutters, or in any way get out of order. It is simple in construction, and sells for less money than the old fasteners now in use.

It avoids the danger of reaching out of the window to fasten the shutters back, and the very great inconvenience of rusty and frozen bolts. The hooks are 7 and 10 inches long, Galvanized.

THE "AUTOMATIC" BLIND AWNING FIXTURE.

By means of the Automatic Blind Awning Fixtures the blinds can be pushed out and closed automatically. They give no trouble in using and are so simple that any child can work them, are never out of order, and will last as long as the blinds. They do away with the necessity of cloth awnings. They do not have to be put up in the spring and taken down in the autumn, but are always ready for use. They ventilate and cool the room, giving free circulation of air and an agreeable, refreshing shade. By using these fixtures and opening the window at the bottom, and slightly at the top, perfect ventilation of the room is secured. They are equally well adapted for old and new blinds, and do not prevent the use of the blinds in the ordinary way. Full printed directions with every set.

PULLMAN SASH BALANCE.

The Pullman Sash Balance is a simple, durable, a compact appliance for balancing window sashes, consists of a thoroughly tested steel clock spring, led within an iron drum, around which is wound a npered brass tape or ribbon, which is attached to the th, while the resistance of the spring furnishes the juisite tension or supporting power. The tension of spring is controlled by means of a brake, which is gulated by a screw in the face plate, whereby the lance may easily and conveniently be adjusted at y time to the exact weight of the sash, and give to a latter a steady or uniform motion.

This balance is especially useful in remodeling i houses, as it can be easily applied to o'd windows thout altering the frame or sash.

РАТ. ОСТ. 30ТН, 1888.

Side Balances.

For extra heavy sash use four balances instead of two; this will enable you to use the balances for sash weighing from 40 to 80 pounds each.

HUGUNIN PATENT SASH BALANCE.

The Hugunin Improved Adjustable Screw Sash Balances.

Size No. 2, dimensions 41/8 x 11/8 inches, capacity 20 pounds and under, each sash,

Per doz., \$2.50, each, \$0.25.

MUCH CHEAPER THAN WEIGHTS.

The sashes are closed by a slight pressure of the hand. Automatically controlled friction is used while holding sash or balancing their weights.

DICKSON'S PATENT TRANSOM LIFTER.

The Dickson is the only lifter in the market that is universal in its adaptability to meet all the requirements, as in its one form it swings out or in sashes centrally pivoted, or hinged at either top or bottom, and in every case for RIGHT or LEFT HAND.

No special bracket is everneeded, as our lifter operates transoms deeprecessed as well as if they were flush, thus saving the cost and delay of sending for extra parts.

When the Torsion Spring Check is used, the following additional charge will be made:

For 1/4 5/16 3/8 Rods. \$0 08 \$0 10 \$0 12 each.

RICHARDS' PATENT PARLOR DOOR HANGERS.

Richards' Parlor Door Hanger.

PRINDLE PARLOR DOOR HANGERS.

The Frindle Hanger the simplest and most perfect in construction of any Hanger yet produced. No mortising of the door is required, except the fitting of a small bronze adjusting plate at the extreme top edge of door. The Hanger plate is perfectly flat and requires no fitting.

Full directions furnished with each set of Hangers, also full-sized diagram, showing cross-section of partition and track in position. Flat bronze adjusting plates are packed with Hangers.

WARNER'S PARLOR DOOR HANGER.

Cut shows half a set.

Warner's Parlor Door Hanger. Broad, flat wheels, wood track. Noiseless, anti-friction bearings. Adjustable. By their use the necessity of cutting carpets is obviated. There are no flange wheels to ride or get off the track. There is no iron track on the floor. They are entirely concealed from view. The heaviest doors can be opened and closed with perfect ease. They can be readily adjusted to overcome settling or shrinkage. No. 215. Per set of four, 31/2-inch Wheel Sheaves and 28 feet of track, \$4 00

With bronzed edge plates, either astragal or flat.

THE IMPROVED WARNER SINGLE TRACK PARLOR DOOR HANGER.

The Single Track is hung to one line of studding, and the Hangers may be put up complete in one-third the time required for others.

In all respects it is unequaled. Rapidity of putting up. Simplicity of construction. Ease and noiselessness of running.

It saves time and material. Trueing one line of studding. Putting up one track. Mortising or cutting studding.

THE

ECLIPSE DOOR SPRINGS AND CHECKS.

Prevents doors from slamming. Saves the hinges from the enormous strain experienced with other door checks. It can be placed on any door. The only door check that allows the door to open wide,

When ordering Eclipse Door Checks, consider the size of the door, not so much the thickness as the weight

and the amount of surface exposed to drafts,

1 1/2-inch Check should be used with all inside doors, unless they are unusually heavy, when a 2-inch may be used. Use 1 3/2-inch Check also with ordinary outside doors; for heavy outside doors a 2-inch Check will be more suitable. The 2 1/2-inch Check should be used only on unusually heavy outside doors. If the piston does not work freely the interior of the cylinder should be thoroughly cleaned with a dry cloth.

When Cylinder is Fastened to Door.

1. Fasten the Cylinder securely to the top of the door, about two inches beyond its centre, measuring from the hinge edge, so that the whole of the mouth of the cylinder stands above the door. See cut.

2. Insert the piston as far as it will go, keeping the little wooden disk as near the mouth of the cylinder as possible, and shut the door.

3. Place the foot of the piston with the set-screw side toward the hinges, and in a position parallel with the top of the casing and screw firmly to the casing. See cut.

NORTON DOOR CHECK AND SPRING.

The slamming of doors and the breaking of glass rendered impossible by the use of the new improved Norton Door Check and Spring.

This device consists of a Cylinder, Piston, Spring, and Self-adjusting Valve. It is provided with suitable brackets, and is adapted to be attached to the TOP PART of a door and the FRAME OVER the door. In it are two great powers, namely: the Spring, which is sure to close the door—drawing the hardest when it is nearest closed—and the Check, Or the Cushioning of the Piston on Air, which brings the door to a stop for an instant near the jamb, then quietly but surely closing the door and latching it by the operation of the Spring, being regulated by the Automatic Valve, which permits the Air to enter the Cylinder freely while opening the door, and while closing exhausts the Air more or less, as the force exerted on the door to close it is greater or less.

THE CORBIN LIQUID DOOR CHECK AND SPRING.

It is noiseless, strong, durable, perfect. Sure to close the door without slamming.

With a Corbin Check attached, the door opens with such slight resistance that one would hardly notice it, which is a very pleasing feature, and especially appreciated by the aged or weak, as well as by the strong. It is noiseless in working, and positive in action. The checking power is controlled by a regulating screw on the side of the cylinder, which can be quickly adjusted so as to close the door at any speed desired and make slamming of doors absolutely impossible.

The tension, or closing power of the spring, can readily be increased, decreased, or removed entirely, without disarranging any other part of the Check.

The arms are connected by a ball joint, which prevents the Check from binding in case the door sags, or swings out of line. The bearings are very few, large, and strong. By means of the extension arm, this Check can be accurately attached to either flush or projecting finish.

PRICE LIST.

In determining Size of Spring and Check to be used on Outside and Through Hall Doors, Strong Winds and Draughts must be considered.

THE "NO SLAM" SCREEN DOOR CHECK.

d to

WEL

Showing Door Closing.

Showing Door Closed.

No. 1. "No Slam" Screen Door Check, each, \$0 25

This is an automatic Check, for Screen and other light doors, which can be applied in connection with any Door Spring or Spring Hinge. It has a Solid Rubber Ball, Nickel-plated Trimmings, and is a durable Check which will not rack the door. Packed with simple directions for applying; complete with screws.

ENGINE HOUSE DOOR SPRINGS.

To any one who has seen the rapid preparation made for getting an engine to the scene of a fire after an alarm has been sounded, it will be plain that the efficiency of the department in some measure depends upon how suddenly the door can be opened automatically. Systems vary somewhat as between different cities, although in the main they agree. The original alarm moves the lever, which releases

> the horses and opens the stable doors. The horses rush out and place themselves alongside the pole of the engine. At the same instant, men are ready

to hook the traces and attach the breast chains. By this time the driver is on his seat and the enginemen in their places. All is ready for the door to open. The driver reaches above his head, pulls a ring attached to a rope that releases the front doors, which in turn swing open by the force of some such spring as we show. It is evident that considerable power is required in a spring for this purpose, for as the doors start to open the horses rush forward as though it were not possible for anything to be between them and the street. If the doors should fail to swing clear back, there would at once be either an engine or a door requiring considerable repairs. When it is considered that from the time the alarm is sounded until the engine is out of the house only eight, or, at the most, ten seconds have elapsed, it will be seen how necessary great strength and efficiency of parts become.

Suitable for any door where a strong, durable spring is required, made of the best quality of steel, in three sizes. By their construction these springs are adapted to swing open or to close a door.

As the arm is now arranged it is intended to close a door, and if the spring is wanted to open a door, place the arm on the other side of the pulley.

ENGINE HOUSE TRIPS.

The Engine House Trip is used in connection with the Electric Fire Alarm System, for the purpose of shortening the time required to make ready to leave the house after an alarm comes in. The trip is placed alongside the alarm bell, and by the first backward motion of the hammer of the gong, preparatory to striking, the automatic trip lever is freed, which throws the stall doors open, also stopping the clock at the same instant, showing the exact time the alarm comes in. The whole connection is made by simply pulling down the lever at the lower end of the case. It can be arranged to light the gas if desired. It is simple in construction and not likely to get out of order. We take pleasure in referring to Chief Engineer Jas. C. Baxter, Jr., of the Philadelphia Fire Department; Captain Geo. R. Stillman of the Fire Insurance Patrol, Philadelphia; A. C. Hull, Supt. Fire Patrol, New York City; Keystone Hook and Ladder Company, Reading, Pa; Vigilant Fire Company, York, Pa; Chief Engineer A. Fernardez, Savannah, Ga.; Delaware Fire Company, Wilmington, Del.; Goodwill Fire Company, Trenton, N. J.

REVOLVING WINDOW VENTILATORS.

These Ventilators are entirely noiseless; they are used to prevent Steam and Frost on Show Windows.

No. Each.

PERFECTION SASH VENTILATOR.

Shut.

No. 842. 2x9 inch Perfection Sash Ventilator, Gold Bronzed, Each, \$1 25 It is close-shutting, and when open directs the air upward, preventing draught upon persons near it.

It is easily operated and cannot be put out of order.

It can be readily set in place, and is highly ornamental as well as useful.

QUAKER CITY WINDOW VENTILATOR.

The Quaker City Window Ventilator is intended to be placed directly under the Sash. The Tin Tubes direct the fresh air upward, preventing draught upon persons near the Ventilator; by means of a damper the amount of fresh air admitted can be regulated or closed off entirely.

COLLINS' PATENT SASH HOLDER.

For use on Sash, Car Windows, Carriage Windows, Slat Blinds, Mosquito Screens, etc.

When used on sash, cords and weights are dispensed with, thus saving the making of boxes in the frame, and the consequent saving of both time and material.

In its adaptability to slat blinds in cars, it is perfect.

When applied to window screens, put one on one side only, at the centre.

No. 880. Collins' Patent Sash Holder, per doz., \$0 75

PATENT PITCHER-SPOUT PUMP.

No. 120.

Figure 120 is a cut of our Patent Pitcher-spout Pump. It will be seen by the cut that we have improved the base of the pump by straightening it in front, thus giving more room to set the side of the pail back of the end of the spout, so water will not drop outside the same. It is constructed to let back the water to avoid freezing, and combines all the latest and most valuable improvements. The cylinder of this pump is fastened to the base by our patent connection (one conical nut and bolt), rendering it a swivel cylinder and valves easy of access.

FRIEDGEN'S PATENT DUMB WAITER.

This Dumb Waiter is operated by hand-power, and is intended to be used in Dwellings, Hotels, and Restaurants.

It consists of certain novel features in the construction and arrangement of a car provided with curved guide plates, rigidly attached to the sides thereof, and fitting around a portion of the cylindrical surfaces of two tubes secured within the main casing, perfectly made of seamless brass; one of these tubes used for the running of a counter weight, each end of this counter weight having a rope attached, secured to the top and bottom of the car passing over suitable size pulleys.

The other tube is utilized for a speaking tube. By this novel arrangement a neat and compact Dumb Waiter is obtained.

In the accompanying drawings Figure 1 shows a front elevation partly in section. Figure 2 is a side elevation of the same. Figure 3 is a top view of the car, showing the Brass Tubes, serving to guide the car in its movement upward and downward, and one of them for allowing the counter weight to travel in, and the other for a speaking tube. Figure 4 is a side elevation of the car on an enlarged scale.

Parts appearing in more than one figure are represented by the same reference letter.

A represents the main case or frame-work enclosing the mechanism of the apparatus. The car A extends upward through as many stories of a building as may be required, and is provided with suitable Doors, B, to permit access to the Waiter. C represents the car having a number of shelves, which can be furnished with trays provided with perforated false bottoms, allowing liquids contained in glasses or other receptacles spilling while being elevated to drain through these perforated plates into the bottom of the trays, thus permitting of the easy removal of the trays without in the least damaging whatever may be upon the remaining shelves of the car.

Tube D is provided with suitable mouth-piece, G, at convenient place for use as a speaking tube.

This Dumb Waiter will be furnished complete and erected in place, or the material will be sold, the price depending on the size and length of the Tubes.

THE NEW YORK SAFETY DUMB WAITER

Has only to be seen to be appreciated and pronounced the most simple and complete of any of its class.

Fixtures for any size Waiter, ALL ONE SIZE. It is provided with SAFETY ROPE, avoiding accident or breakage in case the hoisting rope breaks from long use.

It is so simple to set up that any ordinary mechanic, by the aid of our diagrams and instructions, which accompany each set, need never fail to complete it properly. They are packed one complete set in a case.

They run closer to the ceiling and nearer to the floor than any waiter in the market,

Each set is provided with a clamp brake, in order that the car when loaded (beyond balance) may be held at any desired point.

It Moves with Perfect Ease, and any child of ten years can operate it. It is absolutely noiseless, and has no parts that are liable to breakage.

The Ropes are Always Tight, the manner in which the counterpoise weight is attached allowing for either stretch or shrinkage.

A full size diagram accompanies each set of fixtures, showing the position of wheels on top shelf of well hole as usually placed.

The set, as packed in a case complete, consists of the following pieces: Six 8-inch wheels, two 4-inch wheels, one pulley for weight and safety rope, six 11/4-inch thimbles, one 3/4-inch thimble, one ring for safety rope, one cam brake, one ring for brake cord, one screw eye for guide to brake cord, one patent plate.

The 1

This cut represents a balanced Dumb Waiter moved by a Crank.

It is of a size and price suitable for Dwellings, Stores, Hotels, Hospitals, and Factories,

It is convenient, easy, and rapid to operate, and comparatively inexpensive.

There are many in use, the sliding case varying in size from 12 inches square to 18 or 20 inches by 36 inches, the size being determined by the room that can be spared for such a purpose.

The cut is intended to give an idea of about the size generally used in Dwelling Houses and the manner of putting it up.

W

No. 110.

FEED CUT-OFFS.

An article used in the spout leading from the feed chest to the stable, and intended to govern the supply of feed from the chest in the loft to the stable below.

The capacity between the blades of the feed cut-off is four quarts. The use of the feed cut-off is that it tends to preserve the cleanliness of the food, and enables the attendant to feed his stock rapidly, and with a correct knowledge of the quantity used.

No. 345. Feed Cut-offs, galvanized iron, each, \$4 00 " 346. " " with brass handles and bearings, each, 6 00

ELECTRIC BELLS.

No. 15.

No. 1. Electric Bell Outfit, consisting of one gong bell, one wood push, one "Disque" Le Clanche battery, 75 feet of insulated wire, and staples, . . \$2 00

No. 2. Electric Bell Outfit, consisting of one gong bell, one bronze push, one "Disque" Le Clanche battery, 75 feet of insulated wire, and staples, . .

No. 15. Door Alarm Set, consisting of one gong bell, brass door alarm, one "Disque" Le Clanche battery, 75 feet insulated wire, screws, and staples, 2 25

The door connection is mortised in the door jamb, back of the edge of the door. The alarm is given when the door is opened, and the bell continues ringing until the door is closed. If it is desired to switch off the alarm, for instance, in warm weather when the door is left open, it can be done by means of a switch.

ELECTRICAL SUPPLIES.

Our Illustrated Catalogue of Electrical Supplies will be sent on receipt of a z-cent stamp to pay postage.

WROUGHT-IRON, BRASS, AND BRONZE WORK.

We have especial facilities for making Wrought-Iron, Brass, or Bronze Grilles, Railings, Hinges, and any other Hand-work which may be desired.

For Wrought-Iron Work we would recommend the Bower-Barff Rustless Iron finish, which gives a beautiful blue-black effect and is unchangeable by exposure to the

For Brass or Bronze Work we can finish in Nickel-Plate, Silver-Plate, Oxidized Silver, Antique Brass, Antique Copper, or Chocolate Bronze, as may be required.

COUNTER AND DESK, RAILING.

FINE POLISHED BRASS.
